

ABSTRACT OF THE DISCLOSURE

A faceplate which is adapted to be mounted over a dual outlet electrical receptacle includes a cover, a flange and a fastening device. A storage device includes a pocket-shaped holder and a fastening device. The fastening device of the storage device is adapted to releasably engage the fastening device on the faceplate so as to couple together the faceplate and the fastening device. In this manner, an electric appliance connected to an outlet of the electrical receptacle can be disposed within the holder of the storage device while the appliance recharges.
